NGUYEN QUANG TRUONG

PHP Engineer

Ho Chi Minh City • nguyentruongk530042003@gmail.com • (094) 789 0450

Github: https://github.com/quangtruong2003

Summary

Backend Engineer specializing in building robust, high-performance web applications with PHP 8+ and Laravel. Experienced in designing scalable RESTful APIs, optimizing complex MySQL queries, and leveraging Redis for caching and queue processing to keep systems fast and reliable. Strong advocate for clean code, SOLID design principles, and effective communication in remote team environments.

Technical Skills

Programming Languages:	PHP 8+, Python, Typescript
Frameworks & Libraries:	Laravel 12, Spring Boot, Filament
Databases & ORM:	MySQL, Redis, Eloquent ORM, Database Schema Design, Query Optimization
APIs & Architecture:	RESTful APIs, System Architecture, RBAC, OOP, SOLID Principles
Tools & Environment:	Git, Gitlab, Composer, Postman, Cursor, Claude Code

Experience

Penalty Co., Ltd. District 10, Ho Chi Minh City

Full Stack Developer | *04/2026 – 09/2026*

- Maintained, refactored, and upgraded internal web applications using PHP and Laravel, improving system performance and overall code maintainability.
- Redesigned and modernized user interfaces and UX workflows to enhance administrative efficiency and user engagement.
- Architected and developed an automated bulk product upload system, integrating custom Laravel backend logic with existing WordPress platforms for seamless inventory synchronization.
- Optimized database queries and backend processing workflows to handle large-scale data imports smoothly without impacting server performance.

C3TEK Digital Marketing Solutions District 10, Ho Chi Minh City

PHP Developer | Property Management Application *02/2025 – 04/2026*

- Designed and implemented RESTful APIs and core business logic using Laravel 12 and PHP 8+ for contract lifecycle management.
- Built asynchronous background jobs and queues in Laravel to handle monthly invoice generation and tiered utility calculations without blocking main API threads.
- Improved database performance by fixing N+1 query problems using eager loading, adding composite indexes, and caching frequently requested contract data in Redis.
- Implemented 4-tier Role-Based Access Control (RBAC) to ensure secure data access across Owner, Admin, Manager, and Sales roles.

- Integrated automated PDF generation for contracts and billing statements, enabling quick exports and downloads.
- Collaborated in an agile cross-functional team of 6 to build and maintain features for online room booking and payment tracking.

Personal Projects

- ***SmoothScroll – Desktop Utility App | Rust, Tauri, React*** *05/2026 – Present*
  - Developed an open-source Windows desktop app reaching over 30k+ downloads, customizing system mouse scroll responsiveness.
  - Implemented low-level input hooks in Rust to intercept mouse scroll events efficiently with minimal latency.
  - Built a custom animation algorithm in Rust to deliver smooth, natural scrolling performance across applications.
  - Added application exclusion rules, allowing users to configure custom settings per app.
  - Utilized Tauri 2 with a Rust core and React UI to keep memory footprint light and clean.
  - Maintained active open-source support by resolving GitHub issues and incorporating community feedback.
  - GitHub: github.com/quangtruong2003/SmoothScroll - Website: https://smoothscroll.top/

Education

SaiGon Technology University District 08, Ho Chi Minh City
Information Technology Engineer 2021 – 2025
