Summary

Results-driven Backend Developer with over 1 year of hands-on experience in designing and developing scalable web systems using PHP 8+ and Laravel 12. Proficient in building RESTful APIs, optimizing MySQL databases, and applying Clean Code principles to handle complex business logic. Possesses a strong logical mindset, fast learning capability, and practical experience integrating with frontend frameworks like React. Highly adaptable, eager to embrace new technologies, and available to start immediately.

Technical Skills

- | | | | |
|-----------|------------|---------------|---------------|
| • PHP | • MySQL | • Claude Code | • Cursor |
| • Laravel | • Python | • Spring Boot | • n8n |
| • Git | • Material | • Filament | • RESTful API |

Experience

C3TEK Digital Marketing Solutions

District 10, Ho Chi Minh City

Fresher PHP Developer | Property Management Application

02/2025 – 04/2026

- Engineered RESTful APIs and backend logic using Laravel 12 and PHP 8+ for a core contract management module, enabling seamless creation, termination, and lifecycle tracking of rental agreements.
- Automated monthly invoice generation and complex utility fee calculations (electricity, water), streamlining billing workflows and reducing manual data entry for property managers.
- Designed and optimized MySQL database schemas utilizing Eloquent ORM relationships, ensuring high-performance data retrieval and structural integrity for contracts and financial records.
- Implemented strict Role-Based Access Control (RBAC) to secure sensitive system data across a 4-tier user architecture (Owner, Admin, Manager, Sale).
- Integrated automated PDF generation and export capabilities for contracts and invoices, facilitating efficient document management and record-keeping.
- Collaborated within an agile 6-member cross-functional team to deliver a scalable platform featuring online room booking and integrated payment tracking.

Personal Projects

SmoothScroll – Desktop Utility App | Rust / Tauri / React

05/2026 – Present

- Built a cross-platform desktop app (Windows & macOS) that replaces the default mouse wheel behavior with smooth, frame-perfect scrolling.
- Implemented native low-level input interception to capture and override system scroll events before they reach the OS — no external dependencies, no lag.
- Engineered a custom easing engine in Rust for fluid, physics-like scroll animation that feels natural across different apps.

- Added per-app exclusion support, letting users whitelist/blacklist specific applications based on their preference.
- Packaged the whole thing with Tauri 2 (Rust backend + React frontend) — keeping the app lightweight while still having a clean settings UI.
- GitHub: github.com/quangtruong2003/SmoothScroll

Medical Appointment Booking System / Backend Developer

05/2025 – 08/2025

- Analyzed clinical workflows to design booking flows, patient record management, and service catalog.
- Successfully integrated the VNPay payment gateway (a very common requirement in Retail/e-commerce systems).
- Acted as a bridge between frontend and backend, coordinating API documentation and system testing.

ChatBot (ChatGPT Clone) / Android Developer

10/2024 – 03/2025

- Built a conversational AI app on Android using Kotlin, replicating ChatGPT's core interaction features.
- Integrated Firebase (BaaS) for real-time data sync, user activity tracking, and cloud storage.
- Optimized the mobile UI and API response handling for a smooth, low-latency chat experience.
- GitHub: github.com/quangtruong2003/ChatBot

Education

SaiGon Technology University
Information Technology Engineer

District 08, Ho Chi Minh City
2021 – 2025
